前言 Preface

区块链是一个点对点、去中心化、安全的共享架构，意味着任何访问区块链网络的人都有权利去查看并检查区块链上的数据是否具有欺骗性。基于区块链公开透明且无法篡改数据的特性，我们创建了一个特殊的去中心化的交易平台 Okami PK，与市面上主流的交易平台具有以下区别：

As a point-to-point, decentralized, secure sharing architecture, blockchain means that anyone accessing the network has the right to browse and check whether the data on the blockchain is fraudulent or not. Based on the characteristics of the blockchain (open, transparent and data tamper-resistant), we have established a special decentralized trading platform, Okami PK, which is different from the mainstream trading platforms in the market.

1.风险低：市面上主流的数字货币交易平台，具有极大的风险，背后有量化团队在操控数字货币的价格而给投资者造成毁灭性的损失，而 Okami PK 的交易完全是基于以太坊的智能合约，所有的交易均由参与者与智能合约自由交易，无人为干扰，是完全的自由化交易。

1. Low risk: There are huge risks in mainstream digital currency trading platforms in the market, behind which quantitative trading teams are manipulating the price of digital currencies to bring devastating losses to investors. However, entirely based on Ethereum Smart Contract, all transactions in Okami PK are conducted between participants based on Ethereum Smart Contract (free from man-made interference), thus realizing complete liberalization.

2.防止损失：根据 Okami PK 的设计机制，当购买人数上升，Okami PK 的 ERC-20 的代币 OPK 购买价格上升，反之卖出时价格就会下降，参与者的风险在于买卖时付给合约系统的手续费。

2. Prevention of loss: As per the design mechanism of Okami PK, the purchase price of Okami PK's ERC-20 token OPK increases with the growth of purchasing number. Otherwise, the price will decline when selling out. Thus, participants are under the risks of the service fee paid to the contract system during transactions.

3.持续盈利：无论是购买者的交易分红还是后续推出的持续游戏分红，你都将会获得持续性的收益。这意味着在保持一定的风险情况下你的投入可以无限盈利，而盈利的大小取决于社区发展的速度。类比于你看好一家公司，就会购买该公司的股票来持续带来收益。

3. Sustainable profitability: Players will obtain continuous returns from either buyer's trading dividends or subsequent game bonuses, which means you can profit indefinitely from your investment on the condition of maintaining certain risks. However, how much you can profit will be determined by how fast the community develops. Just like the analogy, you will buy the company's stock to acquire sustainable returns.

4.游戏公平性，Okami PK 后期会推出多款游戏，不同于线下游戏，没有人会出老千！游戏的规则及其可能出现的结果的几率也会全部写在以太坊的智能合约上，保持绝对的公平性。

4. Game fairness: Okami PK will launch different kinds of games in the late period which are different from offline games where no one dares to cheat. Game rules and the probability of its occurrence will also be clearly specified on Ethereum Smart Contract to maintain the absolute fairness.

什么是 Okami PK？ What is Okami PK
简介 Introduction

Okami PK 是一个虚拟货币社区，其流通 Token OPK 的标准 ERC20 以太坊代币。用户可以用以太坊买卖 OPK 代币，OPK 代币则是一种设计精妙的筹码，只要有其他人买卖或交易代币，OPK 代币的持有者都会直接收到一定数量的 ETH 收益（依照总持有量比例）。

Okami PK is a virtual currency community where the ERC20 token is the standard of the circulating Token OPK. OPK token as a kind of exquisitely designed chip can be traded by users with Ethereum, which means OPK token holders can receive a certain amount of ETH profits (As per the proportion of total holding amount) directly in case of token trading or transactions by others.

这代表你越早持有 OPK 代币，就能以越低的成本赚到 ETH！Okami PK 社区与其代币体系的精髓在于：整个系统通过开源以太坊智能合约来确保透明度、安全以及可信赖性。
This means that the earlier you own the OPK tokens, the lower costs you will spend to earn ETH! The essence of Okami PK community and its token system is that the whole system can guarantee transparency, security and reliability through open source based on Ethereum Smart Contract.

Okami PK 核心-智能合约
Core-Smart contract of Okami PK

Okami PK 社区不像任何过去你所看过的社区，它会给你意想不到的惊喜。
Unlike any communities you have experienced before, Okami PK community will bring unexpected surprise to you.

每个智能合约的动作都需要一笔交易，这代表你在社区上的每个动作都需要由以太坊网络上的使用者送出交易。包含再投资(Reinvest)、提现 (Withdraw)、卖出(Sell)、移转（Transfer)等，都需要构造一笔交易额为 0 的 ETH 交易，不过以太坊上发送交易需要 GAS 作为费用，所以你的钱包里仍需要这一成本，这也是为什么你会看到有许多 0 的以太交易。

Each action of the smart contract requires a transaction, which means each of your behavior in the community can only be sent by users on the Ethereum network for transaction including Reinvest, Withdraw, Sell, Transfer. A transaction with a transaction amount of 0 ETH must be constructed. But GAS must be used as the expense to send transactions on Ethereum. This is a cost needed in your wallet, which is the reason why you can see a lot of 0 Ethernet transactions.

Okami PK 智能合约采用去中心化的方式管理社区的全部资产，读取智能合约数据在高负载的状态下常会慢，这也就影响社区前端数据呈现有时候会不稳定，当官网网站不稳定时，你可以尝试使用其他网站来使用完整功能和智能合约交互，完全不受影响。当然，你也可以手工与智能合约交互。

Total assets of the community are under the management of Okami PK smart contract in a decentralized manner with the slow reading of smart contract data under high load, which will cause the instability of the front-end data displayed in the community. In case of an unstable official website, users can interact with smart contract by using the complete functions, completely free from the impact. Of course, users can also interact with smart contracts manually.

在社区上买卖时，你是与 Okami PK 的智能合约直接交易，这里不存在所谓的交易对手，你唯一的交易对手就是智能合约。Okami PK 智能合约单独负责发放 OPK token、增加供给，也负责销毁与降低供给，这都在社区上的买卖时发生。除此之外，智能合约也负责决定 OPK token 的价格。

User trades with the Okami PK smart contract when trading in the community as there exist no so-called counterparties, and smart contract is the only 'rival'. The Okami PK Smart Contract is responsible for issuing OPK tokens, increasing supply, and also for destroying and reducing supply, which occurs during trading in the community. Besides, the smart contract also determines the price of OPK token.

即用户所有在社区的资金全部在智能合约账户中保存，其价格也有智能合约自动控制，一切的交易全部在以太坊网络上自由的完成。

In other words, users' assets in the community are stored in the smart contract which also controls its price automatically. All transactions are freely completed on the Ethereum network.

Okami PK 优势 Advantages of Okami PK

1.分红： 持有 OPK token，每当有其他使用者在社区上买、卖或移转 OPK token，你都会被分到免费的 ETH，大部份的持有者大概每天可以分到 0.05% 到 2% 的回报，这些完全依赖当前时间段的交易量。

Dividends: Users holding OPK tokens will be distributed with free ETH when other users buy, sell or transfer OPK tokens in the community. About 0.05% to 2% returns can be distributed to most holders, which entirely depends on the trading volume during the current time period.

2.公平：OPK token 的分配异常的公平，每个人都拥有同样的机会买入，并依照他们所持有的 OPK token 数量分配利润。
Fairness: As OPK tokens are distributed in an extremely fair manner, everybody has the same chance for purchasing and profit distribution according to the number of OPK tokens they hold.

3.防诈骗： 你放入整个系统的以太币不由任何个人或团体所持有，而是由开源的以太坊智能合约拥有。合约是无法改动的，这也代表没有人可以把资产卷跑。
Anti-fraud: It is the open source Ethereum Smart Contract that own the Ethereum coins that are put in the whole system rather than any individuals or groups. The contract cannot be modified, which means no one can rob your assets.

4.透明： 你可以完整的查看整个社区的原始代码，整个社区的规则清楚完整地呈现。在社区里，干净、透明与诚实是整个社区被开发者们奉为圭臬的。
Transparency: The original code of the whole community can be checked and the rules of the entire community are clearly and completely presented. Developers regard transparency, cleanness and honesty as the standard of the whole community.

5.去中心化： 整个社区后端是搭建在以太坊区块链上，并不由任何一个人拥有。如果网站挂了，别担心，整个智能合约都还是可以透过其他前端方式进入，智能合约只会按照规则，完全公平且无法更改。
Decentralization: As the entire community back end is established on the Ethereum blockchain and not possessed by any individual, users do not need to worry about the website's crash because the whole smart contract is still accessible from other front-end channels. The smart contract will only comply with rules with absolute fairness and non-alterability.

Okami PK 的风险 Risks of Okami PK
没有任何事情是被保证的，在虚拟货币领域更是如此，在此一领域你做的所有事情都是需要非常小心且审慎怀疑，拿 OPK 来说，这里是几个可能的风险：
Nothing in the world can be guaranteed, and it's especially true in the virtual currency world where you need to be very careful. Take OPK as an example, following are potential risks:

1. 黑客入侵，如果一个顶尖的黑客发现智能合约或者以太坊虚拟主机里的漏洞，他们可能有办法偷走整个合约里的 ETH，许多不同独立的可靠开发者已经仔细的审视过合约，被黑但不能说没有可能。
Hacking: In case of a loophole of smart contract or Ethereum web host detected by a top-level hacker, the ETH of the entire contract may be stolen. Many independent and reliable developers have carefully reviewed the contract to ensure the minimum possibility to be hacked, but it is still possible.

2. 交易量停滞，OPK 的命脉在于交易量的活跃，如果交易量停滞或者停止，没人买卖，产生的收益就会越来越少。是否损失取决于你什么时候加入进来，如果这一切发生之前你还没达到损平，那可能你就会蒙受损失，没人可以知道这会何时发生。因为生态系的游戏不断推出，所以短时间不太可能会发生，但不代表不会发生。

Stagnation of trading volume: The lifeblood of OPK lies in the active trading volume. In case of stagnant or suspended trading, there will be no traders and the profits will decline. Whether you lose money or not will be determined by when you get involved. In the event of not reaching loss limit before this happens, you may suffer losses. No one knows when this will happen as it is not likely to happen in the short term with the continuous launching of ecosystem games, but that's not to say it won't be the case forever.

3. 恐慌性卖出，每枚 OPK token 的价值取决于买卖行为，买 OPK token 会使得略为价格上升、卖 OPK token 则会使价格略为下降，但如果有个恐慌情绪造成每个人疯狂卖出，那么代表 OPK token 的价格会显著的下滑，也意味着持有的代币价值会大量降低，不过当有大量的恐慌卖出，如同不断买入一样，你也会因为卖出不断收到分红，所以这真的会是坏事吗？

Panic selling: As the act of buying and purchase determines the value of each OPK token, OPK token purchasing will raise the price slightly, while the selling will reduce its price slightly. Once everyone sells crazily in a panic mood, the price of OPK token will decline significantly, which means that user's token will devalue significantly. In the event of panic selling just like continuous buying, you can also obtain dividends due to continuous selling. So maybe it is not that bad.

这些是主要加入后的风险，就好像我们常听到的警语，「交易有风险，入市需谨慎」，请自行决定这是不是值得一试!

Abovementioned risks after participation are just like warnings we often hear, "Be careful to enter the market due to risks". Please make careful decisions.

第一阶段-ICO 发布
Phase 1: ICO

为了好地支持社区发展，我们决定开启前进行 ICO 代币预售，并确保所有的预售价格购买都是一样的，具体的规则如下：

To support the community development, we decide to pre-sell ICO tokens before initiation and guarantee the same price during the pre-sell period. The specific rules are as follows:

1.Okami 大神：Okami 大神可以在 OkamiPK 的 ICO 阶段购买价值最多不超过于 10ETH 的代币，最少为 5ETH。同时为了保证公平性，所有 Okami 大神购买价格将全部以价格 (0.002ETH/OPK)进行销售；

Okami: Okami can buy tokens of not exceeding 10 ETH at most at the ICO stage of Okami PK, 5 ETH at the minimum. At the same time, to ensure fairness, all purchased tokens by Okami will be sold at the price (0.002ETH/OPK);

2.团队激励：为了更好的激励研发团队，会按照价格(0.002ETH/OPK)，分配额度为 100ETH 的 OPK 代币给团队。

Team Incentive: In order to motivate the R&D team, team members will be distributed with OPK tokens in the quota of 100 ETH at the price (0.002 ETH/OPK).

3.名额：Okami 大神的总的 ETH 额度为 500ETH，售完为止，启动正式的流程。

Quota: The total ETH quota of Okami is 500 ETH, with limited supply. Then the official process will initiate.

第二阶段-社区开启
Phase 2: Community initiation

在 ICO 阶段结束后，OkamiPK 社区正式开启，OPK 的初始价格定在 0.004ETH，主要的规则如下

Okami PK community will be officially initiated after the end of ICO stage. The initial price of OPK was set at 0.004 ETH. The main rules are as follows:

规则 Rules

1. 当你用 ETH 换取 OPK token 时，会有 10% 的交易费产生，这代表如果你用 10 ETH 换成 OPK token，因为交易费的关系，你会取得 9 ETH 价值的 OPK token。

10% transaction fee will occur when exchanging OPK tokens with ETH, which means you can obtain OPK tokens with the value of 9 ETH when exchanging 10 ETH into OPK tokens after the transaction fee is charged.

2. 不像一般的社区，Okami PK 社区收取得手续费不会归团队所有，而是把这 10%的交易费分配给所有 OPK 的持有者，收益的分配取决于每个人手上拥有的 OPK token 数目。

Unlike the ordinary communities, the service fees collected by Okami PK community will not be owned by the team, 10% of which will be distributed to all OPK holders. Profit distribution depends on the amount of OPK tokens held by everyone.

3. 当你拥有 OPK token 时，每次有人使用社区取得 OPK token，你将依照你拥有的 OPK toke 取得 n 比例这 10% 交易税分红，所有分红都是直接用 ETH 支付，所以你将可以在每次购买时就即刻取得分成。

With OPK tokens at hand, once OPK tokens are obtained by someone in the community, you can obtain 10% transaction tax dividends at the proportion of *n* according to your OPK tokens. All dividends are paid directly by ETH, which allows you to obtain dividends once you have purchased.

4. 更棒的是，所有在社区上的交易，比如说卖掉 OPK token 或者转移 OPK token，也都会取得分红，你将会因为一名使用者买、卖、移转 OPK token，而直接收到 ETH 的收益!

What is more fantastic is that you may obtain dividends from all transactions in the community. For example, when selling OPK tokens or transferring OPK tokens, you will directly receive the ETH profits with a user's buying, selling and transferring OPK tokens.

5. 当你的个人收益累积，你可以随时回来网站上看收益的成长状态，并且选择提领或者是再把你的收益投资进来。如果你选择提现，ETH 将会直接打回你的钱包；如果你选择再投资，你的 ETH 收益将被用来购买更多的 OPK token。

With the accumulation of your personal income, you may check the profit growth status back to the website and choose to withdraw or to invest your income. If you choose to withdraw your deposit, ETH will directly transfer the money back your wallet; if reinvest, your ETH profits can be used to purchase more OPK tokens.

6. 每次有新的使用者购买 OPK token，OPK token 的价格都会些许的上升(+10 gwei)，这代表每当人们在社区购买 token，你的 OPK token 就会值越来越多 ETH；不过如果人们卖掉他们的 OPK token，代币的价值也会些许下降(-10 gwei)。

The price of the OPK token will increase slightly (+10 gwei) once new users purchase, which means that your OPK tokens will be worth more and more ETH when others buy tokens in the community. However, these tokens will devalue slightly if people sell their OPK tokens (-10 gwei).

7. 你可以在任何时候回到社区卖掉 OPK token，社区将会依照时价买回并支付给你对应的 ETH。

You may go back to the community and sell the OPK token at any time. Then the community will buy back at the current price and pay corresponding ETH to you.

推广计划 Promotion Plan

如果你买足够的 OPK token (100 个 token)，就会拥有主节点(master node)，你就可以分享你的主节点链接来取得额外收益。每次通过你的主节点购买，你会取得另外 3% 的买入价格收益。举例来说，如果你的朋友通过你的链接消费了 100 个 ETH，你将会立刻分得 3ETH！

Users may own the master node once buying enough OPK tokens (100 tokens), and then obtain additional profits by sharing your master nodes. Purchasing through your master nodes can bring you 3% of the buy price gain. For example, if your friend has consumed 100 ETHs by using your link, you will immediately get 3ETH!

第三阶段-Okami PKLong
Phase 3: Okami PKLong
简介 Introduction
Okami pklong 游戏会产生一个 24 小时的倒计时，玩家通过不断的买入 Key 来增加倒计时的时间，直到无人购买 Key 并且时间倒计时为 0，那么以太坊的智能合约将自动按照预定好的规则分配奖金池里面的奖金。

A 24-hour countdown will be generated in the Okami pklong game. Players can prolong the countdown time by constantly buying Key until no one buys the Key at the time of countdown as 0. Then the bonuses in the bonus pool will be distributed according to the preset rules of Ethereum smart contract automatically.

规则 Rules

1. 在一轮倒计时（23:59:59）结束时购买到最后一把钥匙的玩家，按照比例分配赢走彩池。

The player who buys the last key when a round of countdown (23:59:59) ends will win the bonus pool according to the proportion.

2. 玩家可以购买任意 key（钥匙），这会增加这一轮倒计时的时间。第一把 Key 的价格是 0.000075ETH，Key 的数量没有上限，玩家每次购买行为，key 的价格会有上涨，而价格会根据以太坊的智能合约自动算出。

Players can buy any key (key), which will prolong the countdown time of this round. The price of the first Key is 0.000075ETH. Due to no limit of the number of Keys, the price of the key will increase each time when the player purchases. But the price will be automatically calculated based on Ethereum Smart Contract.

3. 每轮游戏期间有其他玩家购买 key(钥匙)时，Okami PKLong 会根据 key 的拥有比例在游戏中让玩家获得以太坊分红，这些奖励可以随时提现也可以再进行投资。

Once other players purchase key during each round of the game, players can obtain Ethereum dividends in the game from Okami PKLong according to the proportion of players' keys for withdrawal any time or re-investment.

4. 每购买一把 Key 会加 30 秒的倒计时时间，倒计时最长时间不超过 24 小时。

30 sec countdown time will be added each time when player buys a key. The countdown time will not exceed 24 hours at the longest.

战队系统 Combat team system

在 Okami PK 中，每次购买 Key 之前，需要选择一个队伍加入，OkamiPK 提供四个队伍，分别是：战神阿瑞斯、爱神丘比特、智慧女神雅典娜、海神波塞冬。你选择的队伍会决定你买 key 的资金分配比例，以及假如你赢了这一轮的话，奖池会如何分配。每个队伍的规则分别如下：

Players need to choose a team from the following four provided by OkamiPK and join in before buying the key in Okami PK. They are: God of Wars Ares, God of Love Cupid, Goddess of Wisdom Athena, God of Sea Poseidon. The team you choose will determine the fund distribution proportion and how to allocate the bonus pool if wining this round. The rules for each team are as follows:

	Key	Opk	Pot	Aff	Com	Swap

战神阿瑞斯 God of Wars Ares	30	6	50	10	3	1
爱神丘比特 God of Love Cupid	43	0	43	10	3	1
智慧女神雅典娜 Goddess of wisdom Athena	56	10	20	10	3	1
海神波塞冬 God of Sea Poseidon	43	8	35	10	3	1

解释上面表格中每一列的数据：

Explain the data in each row of above form

- Key: 发送给 Okami PKLong 里面所有 Key 的的持有者（按照持有 Key 的比例发放）
- Key: it will be sent to all key holders in Okami PKLong (issued as per the proportion of key holding)
- Opk: 发送给 Okami PK 里面所有 Okami Token 的的持有者（按照持有 Okami Token 的比例发放）
- Opk: it will be sent to all Okami Token holders in Okami PK (issued according to the proportion of Okami Token holding)
- Pot: OkamiPKLong 本身游戏的大奖池
- Pot: the bonus pool of the game of OkamiPKLong
- Aff：推荐系统的奖金池，用于激励推广员
- Aff: the bonus pool of the referral system is for motivating promotors.
- Com: 用于社区建设和推广
- Com: for community construction and promotion
- Swap: 给其他游戏的奖池做点贡献。合约在设计的时候，需要传入一个其他游戏，传递奖池
- Swap: it can contribute to the bonus pool in other games. It requires to transmit another game for bonus pool transmission when designing the contract.
- Airdrop: is for key holders to airdrop bonus pool randomly provided that the holder buys at least 0.1 ETH quota to obtain the chance to airdrop

每当 Okami PKLong 一轮游戏结束后，最终瓜分的奖池也跟战队的选择有关系，不同的战队按照百分比分配规则如下：

Once a round of Okami PKLong game ends, the final distributed bonus pool will be related with the combat teams. The rules of different combat as per percentage are as follows:

	Key	Opk	Winner	Next round	Com
战神阿瑞斯 God of Wars Ares	15	10	48	25	2

爱神丘比特 God of Love Cupid	25	0	48	25	2
智慧女神雅典娜 Goddess of wisdom Athena	20	20	48	10	2
海神波塞冬 God of Sea Poseidon	30	10	48	10	2

解释上面表格中每一列的数据：

Explain the data in each row of above form

Key: 发送给 Okami PKLong 有里面所有 Key 的的持有者（按照持有 Key 的比例发放）

Key: it will be sent to all key holders in Okami PKLong (issued as per the proportion of key holding)

Opk: 发送给 Okami PK 有里面所有 Okami Token 的的持有者（按照持有 Okami Token 的比例发放）

Opk: it will be sent to all Okami Token holders in Okami PK (issued according to the proportion of Okami Token holding)

Winner: 获胜者获得的奖金比例

Winner: the bonus proportion of winner

Next_round: 自动给下一轮游戏注入的奖金池

Next_round: bonus pool automatically injects into the next round of game

Com: 用于社区建设和推广

Com: for community construction and promotion

推广计划 Promotion plan

为了更好的推广 Okami PK 社区，专属制定了三级推广计划，即推广员总共分为 3 个级别，不同的级别需要花费以太坊向社区团队购买推广资格，具体金额如下：

A three-level promotion plan has been specially designed to promote Okami PK community. The promoters are divided into three levels. Promotors at different levels need to purchase promotion eligibility by buying Ethereum from the community team. The specific amount is as follows:

推广员级别 Level of promotor	购买价格 Buying price
1 级 Level 1	5ETH
2 级 Level 2	1ETH
3 级 Level 3	0.01ETH

推广员的收益，会流向三个部分

Profits of promotors will flow to three parts:

上 级 推 广 员 Superior promotors	推 广 员 奖 励 池 Promotor's reward pool	OKP 母池 OKP main pool	社区 Community
30%	10%	30%	30%

推广员收益来源

Sources of promotor's returns

1.推广员的持续分红

Promotor's sustainable dividends

玩家下注 10%的额度会发放给推广员，但其中可能流向两个地方：

10% of the player's game quota will be released to the promoters, which may flow to two destinations:

● 直接给推广员奖励 Directly used as the promotor's rewards

● 放在大的推广员奖励池，定期通过推广员排行榜前 10 名进行激励 Put in the large promotor's reward pool to motivate the top 10 in the ranking list at fixed period

我们拿用户购买 100ETH 举例，如果根据购买用户上面有多少级推广员来计算获得奖励：

For example, if a user buys 100 ETH, the reward according to how many levels of promotors superior to the user can be calculated as follows:

1 级 Level 1	2	2(推广员奖池)Promotor's bonus pool	2(推广员奖池)Promotor's bonus pool	
2 级 Level 2	3	3	3(推广员奖池)Promotor's bonus pool	
3 级 Level 3	5	5	5	10(OPK 持有分红)OPK holder's dividends
玩家 Player	100	100	100	100

推广员为 1 级，推广的一个用户购买了 100 个 ETH 的钥匙(Key),所属于的推广线的奖励就是 10ETH，如果中间有 2，3 会抽取如上表格的额度。剩下的是 1 级推广员的，如果没有 10 个 ETH 全部是 1 级推广员的。

Assume that a level-1 promotor invites a user to buy 100 ETH keys, thus the rewards belonging to the promotion line will be 10 ETH. If level 2 appears in this period, level 3 will draw the quota as indicated in the above table. The rest will belong to the level 1 promoter and all of the 10 ETH keys will belong to the level 1 promoter.

2 级推广员类似。Similar for the level-2 promotor

假设我是一个 2 级推广员，直接推广一个用户购买了 100 个 ETH 的钥匙（Key），那么我获得的奖励为 3+5=8ETH。

Assume I am a Level 2 promoter and promote a user to buy 100 ETH keys, then I get a reward of 3+5=8ETH.

假设我是一个 1 级推广员，直接推广一个用户购买了 100 个 ETH 的钥匙（Key），那么我获得的奖励为 3+5+2=10ETH。

Assume I am a Level 1 promoter and promote a user to buy 100 ETH keys, then I get a reward of 3+5+2=10ETH

2.推广员排行榜

Promotor ranking

通过上面的推广机制，我们按照以太坊每 6000 个区块(一天多一点)的时间进行激励，排列出前十名的推广奖励。把奖池的 80%拿出来激励本周期的 3 级推广员，20%放在下一个周期，激励的值：

Based on the above promotion mechanism, if we motivate according to the time of every 6,000 blocks in Ethereum (a little longer than one day), and select the top ten promotors to reward. 80% of the bonus pool will be taken out to motivate level 3 promotors in this cycle and the rest 20% will be used in the next cycle. Thus, the incentive value is:

奖励值=推广员奖池*0.8*本周期的推广奖励/前十名本周期推广奖励之后

Reward value = Promotor's bonus pool *0.8* promotion reward of this cycle / Top ten promotors after promotion reward of this cycle

第四阶段-持续发展

Phase 4: Sustainable Development

当 Okami PK 社区上线以后，以 Okami PK 母池为基础，持续的推出吸引力极强的游戏。由于游戏的结果都是无法预测的随机数生成，同时依然会放在以太坊的区块链上，所以会对结果保证绝对的公平，任何人都无法在游戏里进行作弊，这样的游戏设计理念，极大了保证了社区的健康可持续发展，后续 Okami PK 团队会陆续推出 Okami PKShort、骰子、剪刀石头布等几十个游戏变种，尽情期待吧！

After launching the Okami PK community, with Okami PK main pool as the foundation, more and more extremely attractive games will be released continuously. As game results are generated from unpredictable random numbers and will still be stored on the Ethereum blockchain, the absolute fairness of results can be guaranteed and no one can cheat in the game. The game design concept has greatly ensured the healthy and sustainable development of the community. Later, Okami PK team will launch dozens of game variations such as kami PKShort, scorpion, rock-paper-scissors, etc. Please stay tuned!
